Hossein ArabKhaburi

About Me.

Hossein ArabKhaburi

Architect with a background in architectural design and project management, experienced in large-scale technical projects and multidisciplinary coordination. Interested in the intersection of architecture, innovation, and project management, with a focus on developing functional, contextual, and user-oriented design solutions.

Education

B.Sc. in Architecture
Iran University of Science and Technology (IUST)
2017–2022

Professional Experience

Project Planning & Control Engineer
- Sacookar Construction Company | Isfahan Power Plant

July 2023 – July 2024
3D Modeling & Parametric Design
- Esta Engineering Company | Tehran |

Nov 2022 – May 2023
Educational Assistant – Construction Workshop
- IUST | Sep 2022 – Dec 2022

Site Assistant
- GAM Company – Tehran | May 2020 – Nov 2020

Software Skills

3D Modeling and Parametric Design:
Revit | AutoCAD | Rhino | Grasshopper | Blender
Rendering:
Enscape | Lumion
Graphic Design and Multimedia:
Photoshop | InDesign | Premiere Pro
Office & Administrative Software:
Microsoft Word | Excel | PowerPoint

Language Ability

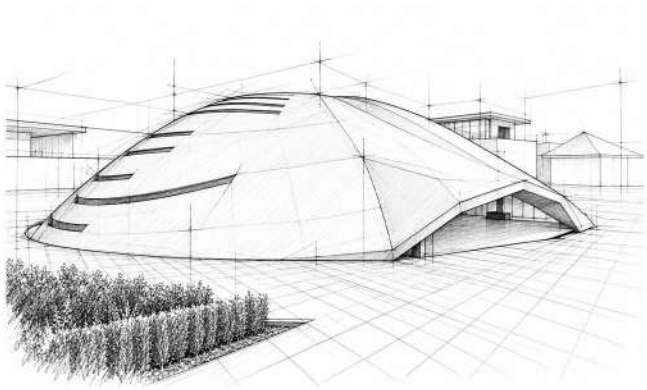

Persian | French | English

Certifications

ADES
Architectural Design Supervision & Execution
220-hour Professional Training Program,
Iran Architecture Center, 2022
HSE-MS
Health, Safety & Environmental Management System
2025

Final Design Project, Iran University of Sience and Tecnology
Location : Mahvizan, Rasht, Iran
Date : 2022, Final Semester of B.Arch
Tutors : Mohsen Faizi Ph.D.

Tehran is a developing city facing many challenges stemming from an undergoing modernization process which have caused plenty of difficulties related to people's lifestyle. An important aspect of the city affecting people's daily life is their residence and its architecture.
Residents of this busy city need a quiet and secluded space in the heart of nature and away from modernity.

In the design process of this collection, the most basic and simplest rain blocking element, the umbrella, has been used. The central core element has the shape of an umbrella with valves for light and air control located on the shell; the windows can get opened or closed when needed. The raincovers protect the interior in both cases. The tradition and history of the region has also had a great impact on the design, because of the climate, the roofs of the houses have always been sloped, this slope has been observed in all parts of the project and has been a source of inspiration for this design.

Mahvizan is a village located in Gilan province, which has pristine nature, so this region is called the lost paradise of Iran.After the needs assessment process, a land area of 20 hectares was designed in two phases to create a peaceful residence for both short and long-term habitancy. The first phase of this project included the residential and agricultural sector. The plan is designed in a way that the residential part can be financed by the income obtained from the agriculture part.

Elementry School

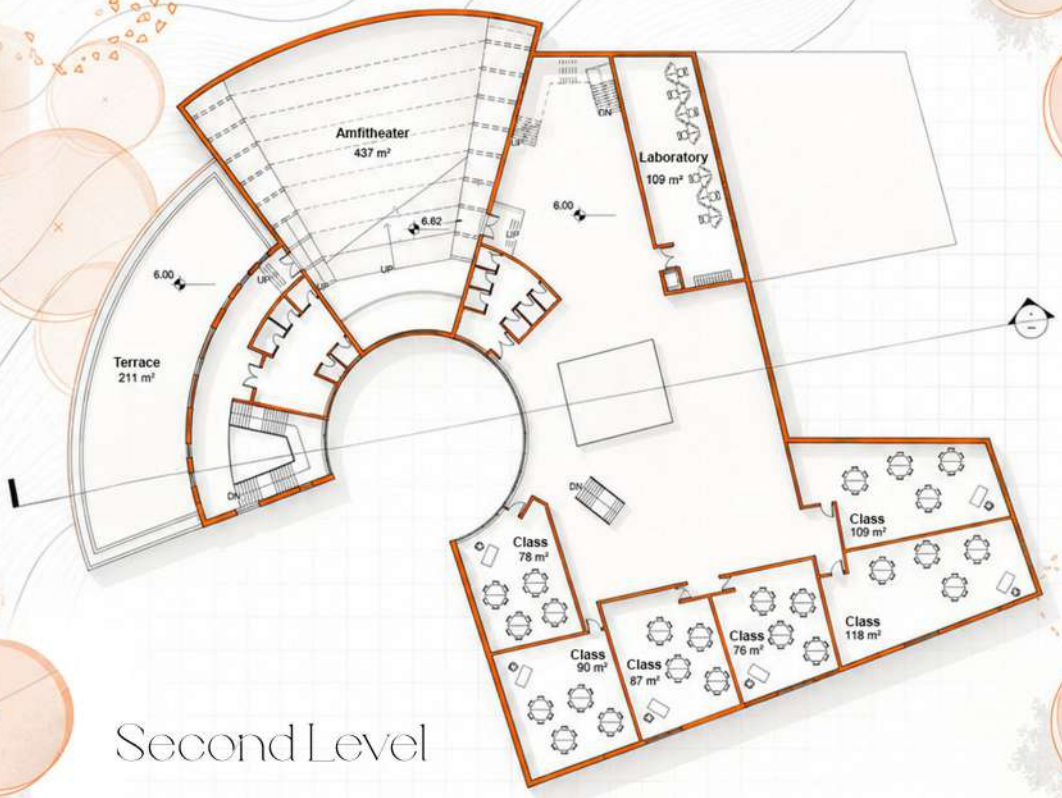

Second Design Studio, Iran University of Sience and Tecnology
Date : 2020, Sixth Semester of B.Arch
Tutor : Dr Samaneh Taghdir

This project explores the design of an elementary school focused on creating a dynamic and engaging learning environment for children.
The design process includes the development of the architectural concept, spatial organization, plans, sections, and three-dimensional form, with particular attention to natural light, social interaction, and the relationship between learning spaces and shared courtyards.

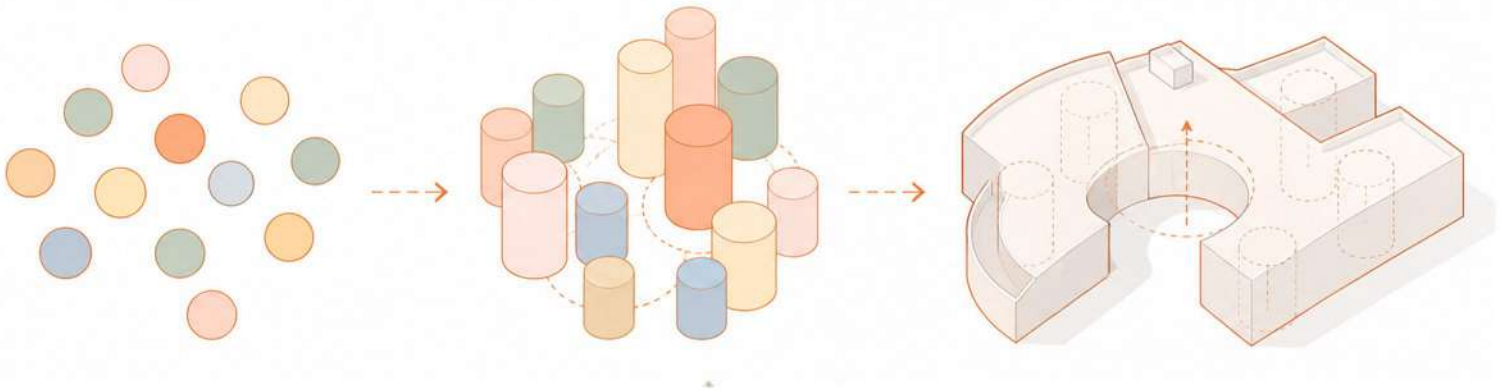

First Level

Second Level

The concept begins with the idea of children as individual elements who come together to form a lively and collective learning environment. The scattered circles, representing the children, gradually transform into volumes and gather to shape the school's overall form. This aggregation creates a central courtyard within the building, bringing natural light into the heart of the school while providing a shared space for interaction. A deliberate recess in the rear volume defines the main entrance, creating a clear point of arrival and transition into the school.

Phase 2 Plans of Villa

Building Elements & Details 2, Iran University of Sience and Tecnology
Date : 2020, Seventh Semester of B.Arch
Tutor : Dr Emami, Dr Azemati

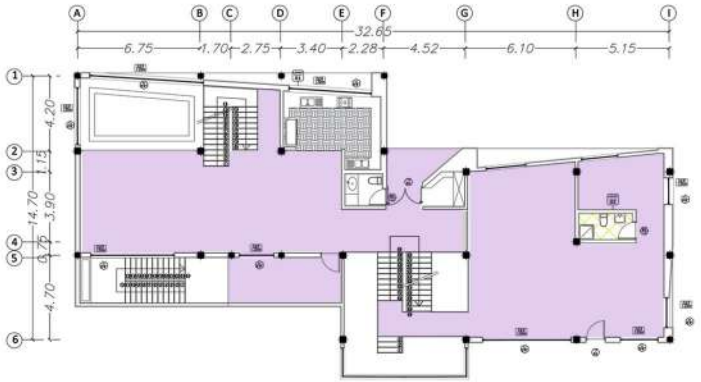

This project is a follow-up to one of my groupmates “Design 1 Project” in our fifth semester of studies. I worked on the second phase of the project in a group as a part of “Construction 2” course in the 7th semester.
As a part of second phase of the plan, we specified the structure and foundation plan, beaming and columing and the design of facade included the details on the wall section.

Cultural Center

Third Design Studio, Iran University of Sience and Tecnology
Date : 2020, Seventh Semester of B.Arch
Tutor : Dr Mohammad Taraghijah

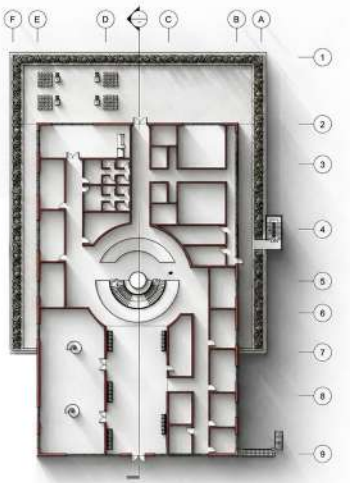

This cultural center, which is located in the downtown of Tehran, is chiefly designed for an audience consisted of architects and art enthusiasts which serves as a place for them to meet, perform plays or art performances, display movies, participate in lectures or workshops and exhibit their art and architectural works in its galleries.

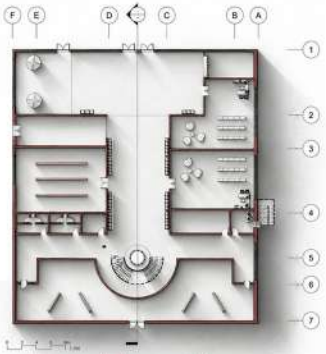

Location and Surroundings

The building is located in a green landscape in the Northeast of the Laleh park which is in the city center of Tehran, a crowded part of the city which is full of university and college students which group up together in the several university campuses around it. The Northern view of the building is the picturesque Laleh parks green zone and the Sothern view is the quite beautiful Keshavarz boulevard.

SetBack for Terrace

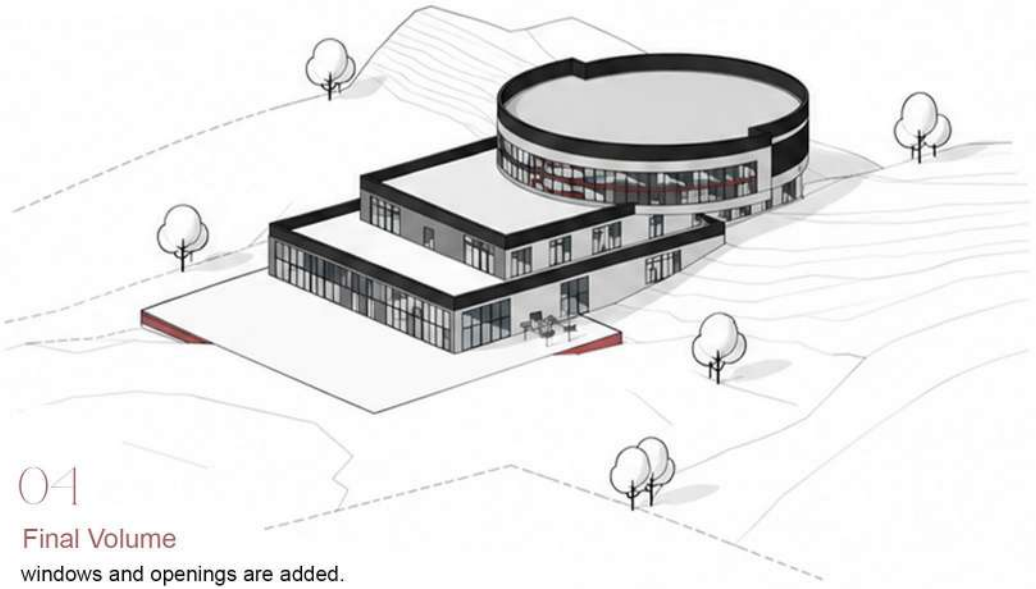

The first floor is setback to create a terrace for groundfloor.

03

Second Floor circle

Adding a circular volume to better adapt the building's form to its function as a cultural center.

04

Final Volume

windows and openings are added.

05

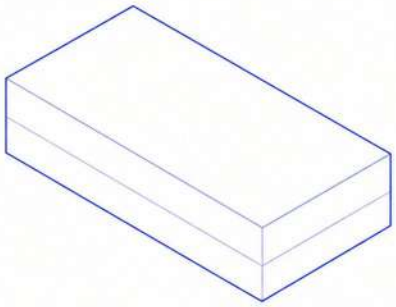

General Hospital

Forth Design Studio, Iran University of Sience and Tecnology
Date : 2021, Eighth Semester of B.Arch
Tutor : Dr Poor Saeed

This project is a small-scale general hospital designed to provide essential healthcare services within a compact and functional layout.
The hospital's overall massing and concept are developed around an H-shaped configuration, providing an efficient layout for hospital functions and clear relationships between different departments.

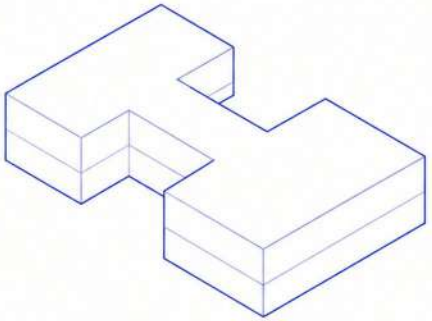

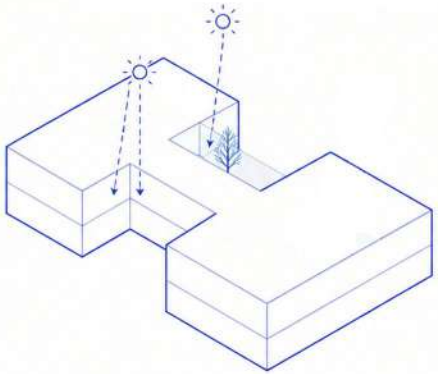

1 | Mass

A compact volume for a general hospital

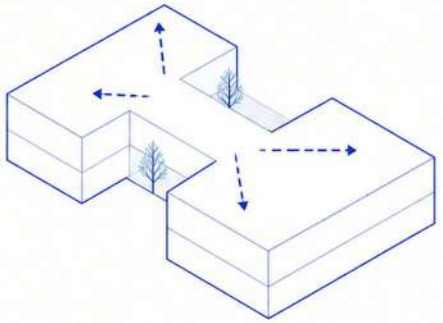

2 | H-Shaped Configuration

An H-shaped form provides an efficient layout for hospital functions and clear relationships between departments.

3 | Daylight & Courtyards

bringing natural light and gran spaces with full-height glazing into the building and create a welcoming central lobby.

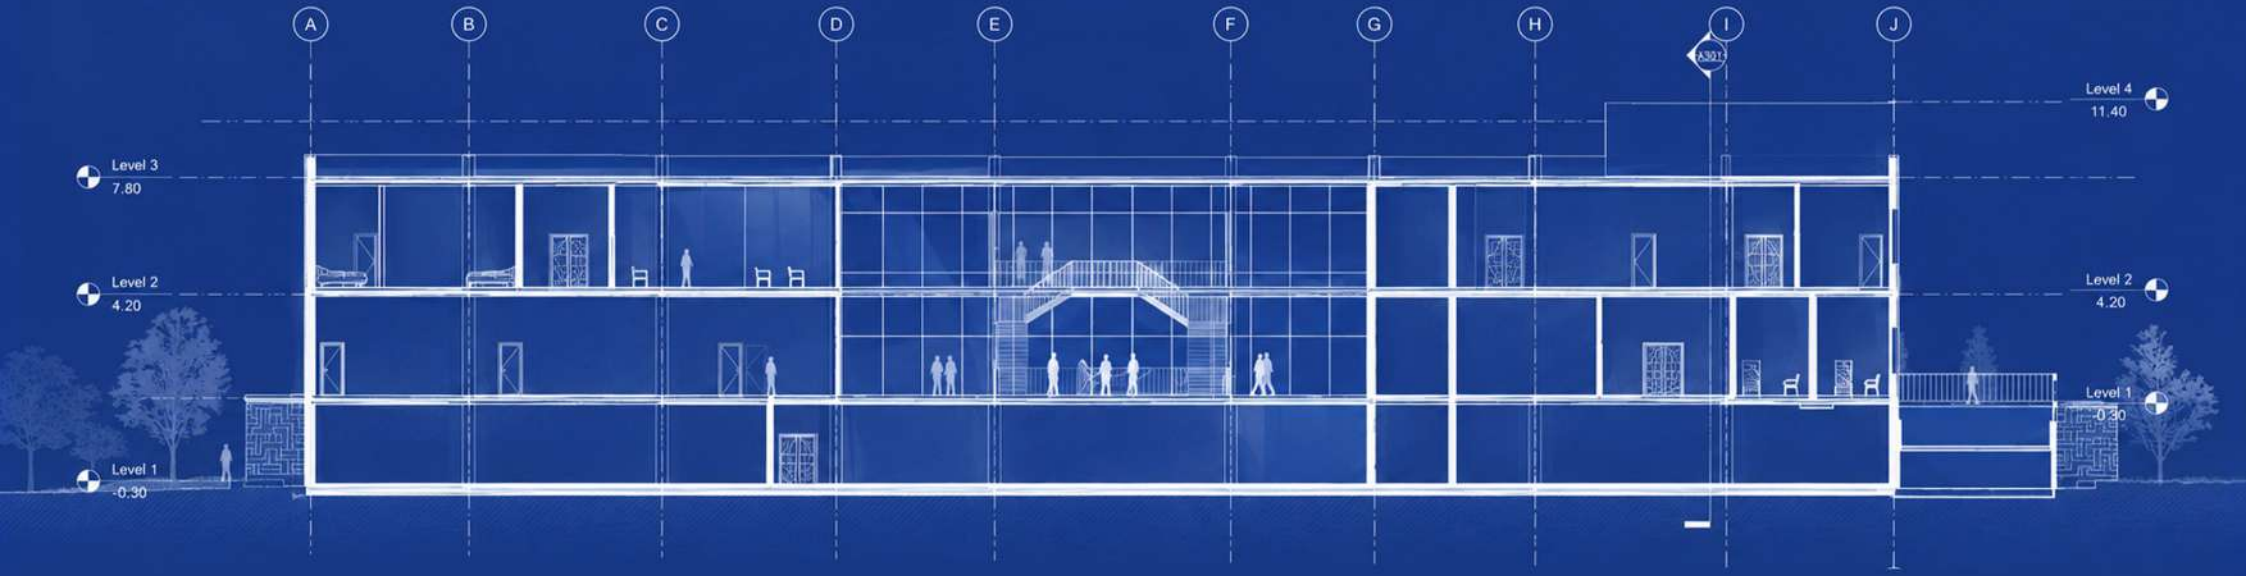

4 | Central Access & Connectivity

The central lobby acts as a hub, providing short and direct acess to all four wings and key departments.

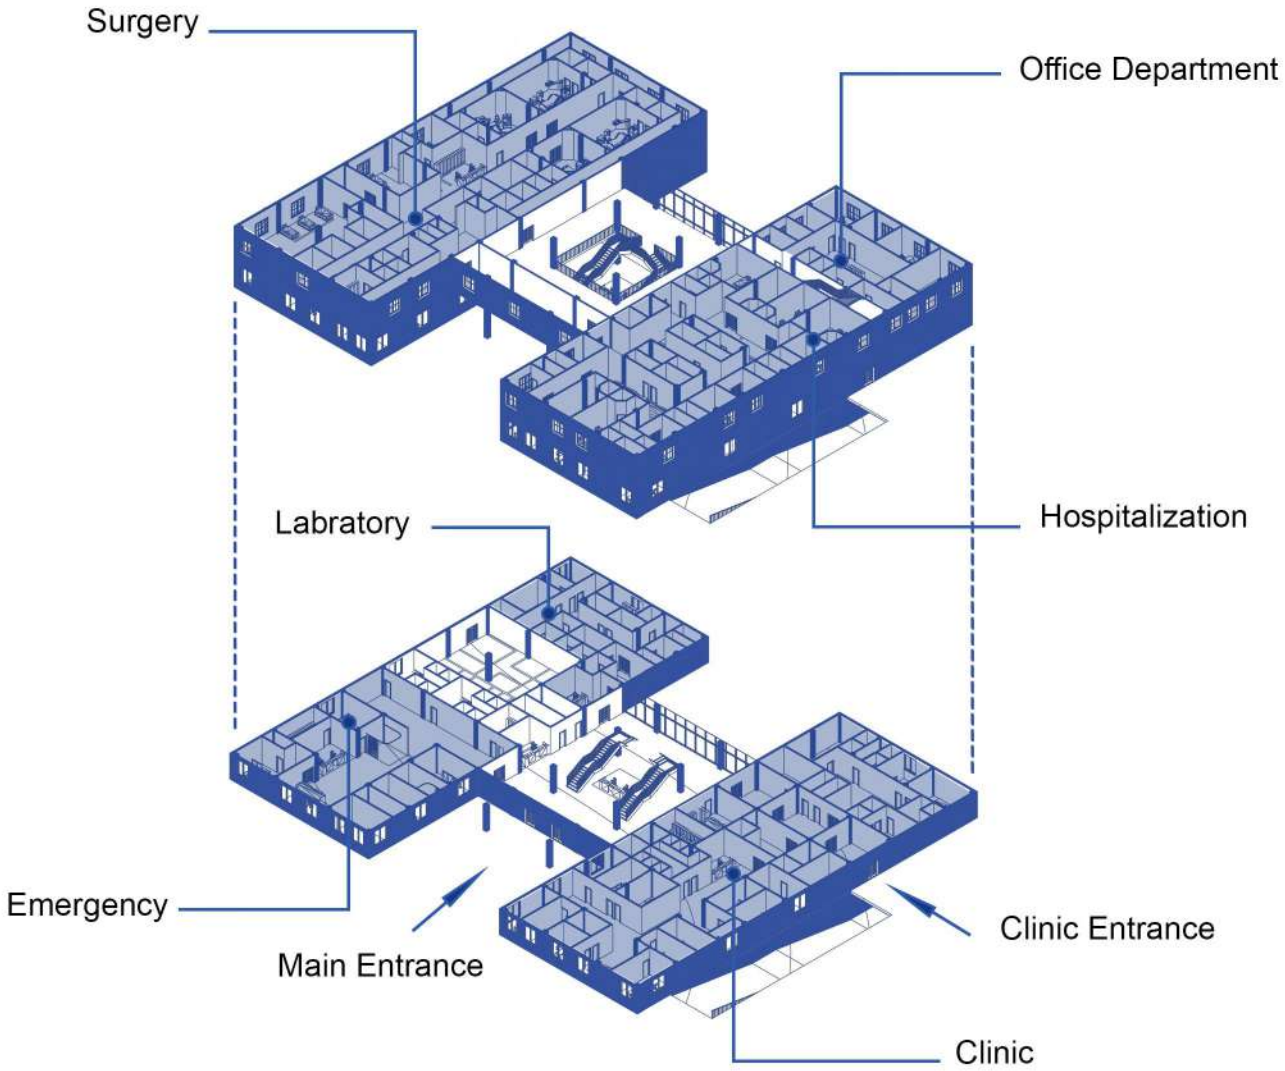

The recessed central volume is designed as a double-height lobby with full-height glazing, allowing abundant natural light to penetrate deep into the interior and creating a welcoming entrance to the hospital.
